Singularity

AI AGENT DETECTION & RESPONSE

Singularity AIDR

Detection, response and data privacy for
AI agents and the people who use them

AGENT CONNECTORS	Claude Code · Cursor · VS Code · OpenClaw · OpenCode · Codex CLI
BROWSER GUARD SITES	ChatGPT · Gemini · Claude · Copilot · Perplexity · DeepSeek · Mistral · Grok

Agent actions are checked before they happen

Shell, file, web and MCP calls from coding agents are evaluated by an engine on the device: allow, hold for approval, or deny.

Sensitive data is masked before it is sent

National IDs, IBANs, emails and API keys become placeholders before they reach ChatGPT, Gemini or Copilot, and come back in the answer on your screen only.

Local first, central where you need it

Detection runs on the device with no account. Add central policy and audit in the cloud, on your own servers or air-gapped.

AI no longer just writes text. It runs commands, changes files and sends data.

Coding agents act with developer credentials; people move data into AI chat every day. Singularity AIDR sits in between: before the action happens and before the data leaves the page.

The agent isn't hacked. It's obeying.

Agents run commands, write files, fetch URLs and call MCP tools. A README, a web page or a tool result they read can steer them into a harmful action.

Customer data is one paste away

Customer records, IBANs, national ID numbers and API keys get pasted into ChatGPT, Gemini and other chat products, often without anyone noticing.

One detection core, four product lines

PRODUCT LINE 1

AIDR for AI coding agents

Every tool call reaches the local decision engine before the host acts, and comes back as `allow` `ask` `deny`.

- **428 YAML detection rules** in 27 files: dangerous commands, credential access, persistence, obfuscation, supply chain; Linux, macOS, Windows.
- **Fail-closed entry points:** on an internal error a connector denies the call instead of letting it through.
- **Out-of-band approval:** `ask` blocks until an operator runs `aidr approve`. The agent is never given an approval tool.
- **MCP Gateway** scans tool results before the model reads them; the **SDK** and **CLI** use the same engine.

Claude Code · Cursor · VS Code · OpenClaw · OpenCode · Codex CLI

PRODUCT LINE 2

AIDR Browser Guard

A Chrome, Edge and Firefox extension that masks sensitive values in prompts, pastes and files before the AI site sees them.

- **Turkish and English personal data:** T.C. kimlik (checksum), IBAN (mod-97), phones, emails, payment cards; secrets and API keys.
- **Your own data:** company code names and exact-data-match fingerprints of your records.
- **Reversible placeholders** (`[EMAIL_1]`): originals come back in the answer, locally only.
- **Enterprise managed:** policy through GPO, Intune or Jamf; counts-only telemetry.

ChatGPT · Gemini · Claude · Copilot · Perplexity · DeepSeek · Mistral · Grok

PRODUCT LINE 3

AIDR Privacy engine

Turkish and English detection and masking. The same rule layer runs in the browser, in the agent engine's DLP detectors and in the enterprise gateway.

- **Validated detection:** T.C. kimlik and IBAN checksums, Luhn for cards; Turkish phone and address patterns.
- **No network needed:** the rule layer runs inside the page, on the device.
- **Optional native host:** NER for names and addresses and OCR for screenshots, on the endpoint.
- **Optional enterprise gateway:** server-side integration with signed policy and tool controls.

Türkçe · English · NER / OCR (optional)

PRODUCT LINE 4

AI Security Posture

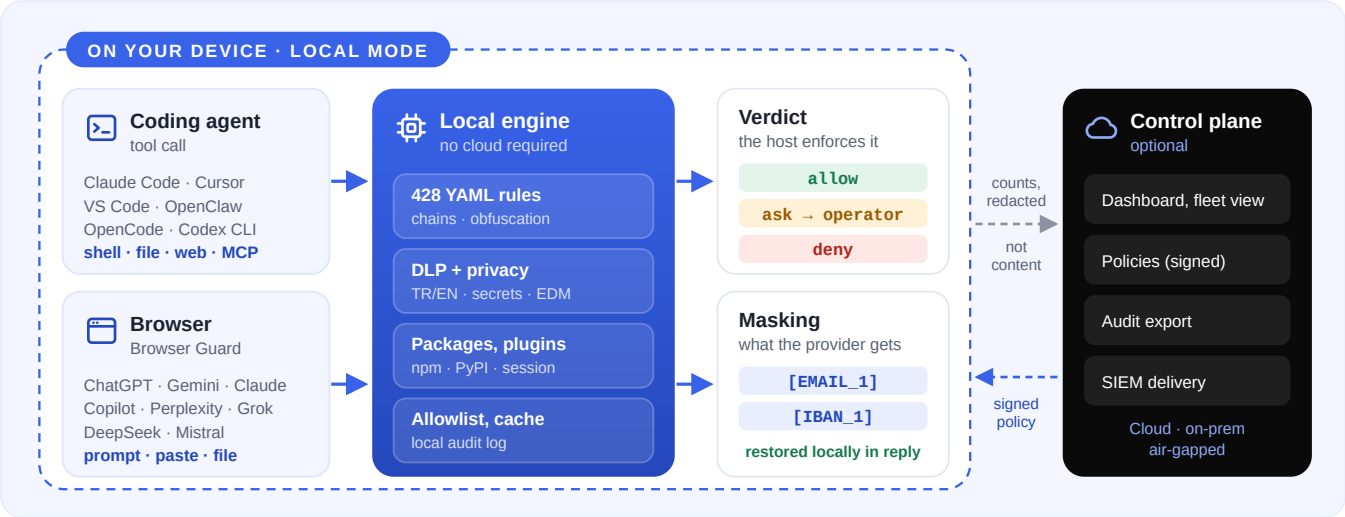

Shows where your AI infrastructure, MCP servers and agent plugins are exposed, in one posture view.

- **AI infrastructure scanning:** 146 AI component fingerprints, 2,000+ CVE rules; findings with severity and CVSS.
- **MCP risk analysis:** MCP server inventory with transport, manifest attestation and 14 risk categories.
- **Skill and plugin scanning:** T01–T09 categories; installed plugins scanned at session start.
- **Posture dashboard:** findings by severity and CVSS with a 30-day trend; an empty view is never shown as clean.

aidr scan · aidr discover · MCP · Skill · Plugin

Decisions are made on the device. Only what you choose goes to the centre.

Agent tool calls and browser prompts pass through the same local engine. The control plane is optional: it distributes policy and collects audit records; enforcement stays on the endpoint.

Capabilities at a glance

Inline verdicts

Allow, ask or deny on every tool call, naming the matched rule and artifact.

Rules as data

428 YAML rules; add your own and override any rule by id.

Obfuscation

Chained and obfuscated commands are unpacked before they are judged.

Supply chain

npm/PyPI supply-chain checks; installed plugins scanned at session start.

MCP Gateway

Tool results scanned before the model reads them; signed server manifests.

Operator approval

`ask` holds until an operator runs `aidr approve`; agents can't self-approve.

Personal data

Turkish and English IDs, IBANs, phones, emails and cards, checksum-validated.

Secrets

Cloud, Git hosting and AI provider keys, JWTs and private keys.

Exact data match

HMAC-SHA256 fingerprints of your records; the plaintext set is never shipped.

Pastes and files

Pasted text and text-based files are masked before they are sent.

Managed policy

Browser policy through GPO, Intune and Jamf; central policy for agents.

Audit and SIEM

JSONL/CSV audit export; Splunk, Sentinel and Elastic formats.

Browser Guard in action

1 · What the user types

Customer email **ayse@firma.com.tr**, IBAN **TR33 0006 1005 1978 6457 8413 26**. Draft a short refund note.

2 findings: email, IBAN (mod-97)

2 · What the provider receives

Customer email `[EMAIL_1]`, IBAN `[IBAN_1]`. Draft a short refund note.

Mapping kept in page memory only

3 · The answer on your screen

Your refund will be paid to **TR33 0006 1005 1978 6457 8413 26**, and confirmation will go to **ayse@firma.com.tr**.

Originals restored locally only

You decide where it runs.

Deployment options

FREE

Local mode

Connectors and Browser Guard run on the device. No account, sign-up or server; this is the default.

SAAS

Cloud

Multi-tenant hosted control plane: dashboard, enrollment, central policy, SSO/SCIM. Enforcement stays local if it is unreachable.

ON-PREMISES

Your infrastructure

The same control plane on Docker Compose or Kubernetes (Helm). Telemetry goes to your server, not to SingularityRD.

AIR-GAPPED

Offline networks

A vendor-signed offline license, signed offline threat and intel packs, and an offline image bundle.

Security and privacy

Local first
Detection and masking happen on the device; the default `local` mode needs no network access.

Counts, not content
Prompts, file contents and detected values are not sent to SingularityRD; telemetry is per-type counts.

Tenant isolation
Postgres row-level security (RLS) across the multi-tenant control plane.

Identity
SSO with Microsoft Entra ID and SAML 2.0, SCIM provisioning, MFA.

Audit
JSONL/CSV export, SIEM delivery, optional signed local audit log.

Signed content
Policies, rule and intel packs and the offline license are signed with Ed25519.

KVKK · GDPR

Designed to support KVKK and GDPR obligations

Data minimisation, masking of personal data before it reaches third-party AI providers, tenant-scoped retention and legal holds, and data residency through on-prem deployment.

Using AIDR does not by itself meet those obligations.

Editions

Free

For individual developers: 1 protected agent

- **Local detection engine** for every connector
- **Control-plane dashboard**

DEPLOYMENT	RETENTION
Cloud	7 days

Team

For teams of 3 or more developers

- Everything in Free
- **Browser Guard**
- **Microsoft Entra ID SSO**

DEPLOYMENT	RETENTION
Cloud	90 days

Business

For organisations of 25 or more developers

- Everything in Team
- **SIEM export**
- **SCIM provisioning**
- **AI Security Posture**

DEPLOYMENT	RETENTION
Cloud, on-premises	365 days

Enterprise

For regulated and isolated networks

- Everything in Business
- **Air-gapped deployment**
- **Dedicated support**

DEPLOYMENT	RETENTION
On-premises, air-gapped	Per agreement

For pricing and a quote: anil@singularityrd.com

Edition scope is confirmed in your written quote. Local mode stays free.

See it in your own environment.

We validate your connectors, browsers and identity provider with you during the pilot.

14-day cloud trial · Apply for a pilot · Live demo
